

Importing a Certificate in a WT3000 terminal

A Technote by
Systems Engineering

March 2005

Summary

This technote describes how to import a certificate in WT3000 terminal.

Audience

1st Level Support, Product Support Group.

Requirements

- V4.X , 5.X on CE terminal
- Certificate addon must be installed – it is not in the standard factory padded image

Example of obtaining a certificate

If the customer does not provide a certificate for testing, you can get it from the secured website.

1. Verify with the customer which format of the certificate is required (needed for step 6):
 - DER encoded binary
 - Base-64 encoded
 - Cryptographic Message Syntax
2. Log into the customers website
3. Double click on the Lock icon (located in the lower right hand corner of the status bar)
4. Selected Details tab
5. Selected Copy to File button
6. Go thru Wizard – select the proper format from step 1
7. Name the file and save to your local desktop. The file should have a .cer extension.

Importing certificate onto WT3000 (with certificate addon installed on unit)

1. Placed certificate onto FTP server directly under the root directory
2. On the terminal, selected Control Panel / Certificates addon
3. Select Import and fill in the information. For the Server Directory I used "/" for root
4. The certificate will display in the window. Example: <http://www.valicert.com/>
